

Basic Facts Drill Cards

(Acknowledgement: Steve Jaunay)

N.B. Students need to know these basic facts before leaving elementary/primary school. Ideally, they should know them long before that.

How the cards work.

On the front of each card are two numbers. e.g. →

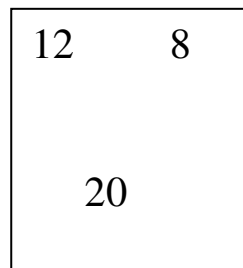

Students need to be able to perform the following three operations with the two numbers.

1. Add them together ($2 + 10$)
2. Subtract the smaller from the bigger ($10 - 2$)
3. Multiply them together (2×10)

On the back of each of each cards are the three required answers.

e.g →

To construct the cards

1. Print the sheets off
2. Mount them back to back (matching correct answer page to each question page) on a piece of card.
3. Cut them out for use as flashcards.
